

## Pentaho / SAP Connector SAP insights - up and running

### Easily connect Pentaho to SAP. Gain deep insights into your SAP data.

The processing of SAP data within Pentaho Data Integration (PDI) is currently only possible to a limited extent. For example, a standard functionality for extracting or loading SAP ERP or BW is a frequent customer requirement which is not yet available.

The Hitachi Data Connector for SAP ERP and Business Warehouse from it-novum offers a broad spectrum for the processing of SAP data, including an easy-to-use user interface with Pentaho Data Integration. The following three SAP steps are supported: SAP ERP Table Input, SAP ERP Function Step, and SAP BW Input Step.

With the Hitachi Data Connector for SAP ERP and Business Warehouse, scenarios and use cases such as the onboarding, blending or offloading of SAP data can be easily realized. The functionality of the Hitachi Data Connector for SAP ERP and Business Warehouse is state-of-the-art and will be continually expanded for further SAP steps.

#### Challenges

- ▶ SAP data is needed for strategic and tactical decisions
- ▶ Data from SAP and non-SAP sources have to be used for analysis
- ▶ Growing data license costs

#### Solutions

- ▶ Preparation and enrichment of SAP data
- ▶ Storage of historical data in the data warehouse / data lake
- ▶ Automated, standardized processes

#### Advantages

- ▶ Better availability of data for decisions
- ▶ Reduction of manual activities
- ▶ Reduction of licensing costs
